

1 CONSTRUCTS

List is any sequence of commands separated by **;** or **newline**, which are always interchangeable.

```
if list; then list
[ elif list; then list ] ...
[ else list ]
fi
```

```
for name [ in word ... ]
do list
done
```

```
for name in word ...; { list }
```

```
foreach name (word ...)
```

```
list
end
```

```
while list; do list; done
```

```
until list; do list; done
```

```
repeat word; do list; done
```

```
repeat word sublist
```

```
case word in
[ pattern ) list ;; ] ...
esac
```

```
case word { [ pattern ) list ;; ] ... }
```

```
select name [ in word ... ]; do list; done
```

Subshell: (*list*)

Current shell: { *list* }

```
function word [ ( ) ] ... { list }
```

```
word ... ( ) { list }
```

```
word ... ( ) sublist
```

```
time [ pipeline ]
```

Condition: [[*exp*]]

Other constructs depend on the options

NO_SHORT_LOOPS and **CSH_JUNKIE_LOOPS**

and should be avoided in scripts.

2 GLOBBING

See also options **GLOB**, **EXTENDED_GLOB**, **KSH_GLOB**, **NULL_GLOB**, **NOMATCH**, **SH_GLOB** **GLOB_DOTS**. *X*, *Y*, ... are any pattern. **#** and **##** require grouping of previous characters; those and **~**, **^** require **EXTENDED_GLOB**.

***** Any string
? Any character
[...] Any of the enclosed characters
[:X:] Character classes where *X* may be:
alnum Alphanumeric,
alpha Alphabetic,
blank Space or tab,
cntrl Control character,
digit Decimal digit,
graph Printable non-whitespace character,
lower Lowercase character,
print Printable character,
punct Printable, not alnum or space,
space Whitespace character,
upper Uppercase character,
xdigit Hexadecimal digit.
Above use locales, may be combined with
other characters e.g. **[-+[:xdigit:]]**
[^...] Any character except those enclosed

<x-y> Any number between *x* and *y* inclusive:
both optional, defaults 0, ∞
^X Anything not matching *X*
(X|Y) Either *X* or *Y*
X~Y Pattern *X*, but not *Y*
(X|Y~Z) Either *X* or (*Y* but not *Z*)
X# Zero or more occurrences of *X*
X## One or more occurrences of *X*
(X) Grouping of (part of) pattern.
****/** (As path segment) short for **(*/):**
match all subdirectories
*****/*** The same, following symbolic links

Globbing flags appear in the form **(#X)** and require the **EXTENDED_GLOB** option. They may appear in groups. *X* may be:

i Match case insensitively
l Lower case matches upper case

I Case sensitive: cancel **i** and **I**
b Activate backreferences for parentheses.
\$match, **\$mbegin**, **\$mend** arrays
give matched string, beginning/end indices
B Deactivate backreferences, negating **b**
m Set **\$MATCH**, **\$MBEGIN**, **\$MEND** for string
M Deactivate **m**.
anum Allow *num* errors in matches (0 to turn off)
s Match only at start of string (use in param expn)
e Match only at end of string

Globbing modifiers appear in parentheses after a pattern (usually *and*'ed):

/ directory
. plain file
@ symbolic link
= socket
p named pipe (FIFO)

*	executable plain file (0100)		or set \$reply to file array	,	'or' lists of qualifiers together
%	device file (character or block)	ddev	on device number <i>dev</i>	-	toggle following links (off by default)
%b	block special	l[- +]<i>ct</i>	link count <i>ct</i> or less (+) or more (-) than <i>ct</i>	M	set MARK_DIRS , this pattern only
%c	character special	U	owned by current effective uid	T	set LIST_TYPES , this pattern only
r	readable (0400)	G	owned by current effective gid	N	set NULL_GLOB , this pattern only
w	writable (0200)	uuid	owned by uid <i>uid</i> ; may also take forms .name., !name!, ... or (name), {name}, ...	D	set GLOB_DOTS , this pattern only
x	executable (0200)			n	set NUMERIC_GLOB_SORT , this pattern only
A	group-readable (0040)			o[nLlamcd]	sort order of resulting files: by name, size, no. of links, access/modification/inode time, depth-first order
I	group-writable (0020)	ggid	owned by <i>gid</i> , as for uuid .		
E	group-executable (0010)	a[Mwhm][- +]<i>n</i>	accessed (less than, more than) <i>n</i> days (months, weeks, hours, minutes) ago	o[nLlamcd]	same but reversed order; Od depth-last
R	world-readable (0200)			[beg[,end]]	Index of matched file(s) to select
W	world-writable (0200)	m[Mwhm][- +]<i>n</i>	modified ditto	:...	remainder treated as history
X	world-executable (0200)	c[Mwhm][- +]<i>n</i>	inode changed ditto		modifiers (each with own :)
s	setuid (04000)	L[kKmMpP][- +]<i>n</i>	size in bytes (or kb, mb, blocks) = (or <, >) <i>n</i>		
S	setgid (02000)	~	negate following qualifiers		
t	files with the sticky bit (01000)				
fspec	chmod-like access permissions e.g. f70? or f:u+w,go-w:				
estr	eval <i>str</i> , use file (\$REPLY) if status 0				

3 OPTIONS

[†]means set by default: these options appear with **no** in front in option listings; **+o** turns single-letter option off (shown in parentheses)

ALL_EXPORT	Export all new shell params (-a)	BEEP[†]	Beep on errors etc. (+B)	CSH_NULL_GLOB	Only one glob must match
ALWAYS_LAST_PROMPT	Back to prompt after list	BG_NICE[†]	Lower priority of bg jobs (-6)	DVORAK	Use Dvorak keyboard for spelling
ALWAYS_TO_END	End of word after completion	BRACE_CCL	foo{ab} → fooa foob	EQUALS[†]	Perform =cmd expansion
APPEND_HISTORY	Append history to file	BSD_ECHO	Builtin echo works like in BSD	ERR_EXIT	Exit shell on error (-e)
AUTO_CD	Directory as command does cd (-J)	CDABLE_VARS	cd foo like cd ~foo (-T)	EXEC[†]	Execute commands (+n)
AUTO_LIST	List on ambiguous completion (-9)	CHASE_DOTS	Resolve links when .. in dir	EXTENDED_GLOB	Use # , ~ and ^ in patterns
AUTO_MENU	Menu after second TAB	CHASE_LINKS	Resolve symlinks in directories (-w)	EXTENDED_HISTORY	Save timestamp to history file
AUTO_NAME_DIRS	Params with paths become names	CHECK_JOBS[†]	Report job status at exit	FLOW_CONTROL[†]	^S , ^Q do flow control
AUTO_PARAM_KEYS	Clever del after param completion	CLOBBER[†]	> to existing file needs > (+C)	FUNCTION_ARGZERO[†]	Set \$0 on function or source
AUTO_PARAM_SLASH	\$path<TAB> → \$path/	COMPLETE_ALIASES	Completion uses unexpanded aliases	GLOB[†]	Perform globbing (+F)
AUTO_PUSHD	Make cd act like pushd (-N)	COMPLETE_IN_WORD	Complete at cursor point in word	GLOBAL_EXPORT[†]	typeset -x applies globally
AUTO_REMOVE_SLASH	Strip slash after completion	CORRECT	Correct command spelling (-0)	GLOBAL_RCS[†]	Use /etc startup files
AUTO_RESUME	cmd can behave like %cmd (-W)	CORRECT_ALL	Correct spelling of all args (-O)	GLOB_ASSIGN	scalar=* globs on right
BAD_PATTERN[†]	Error on bad glob pattern (+2)	CSH_JUNKIE_HISTORY	Single ! is last command	GLOB_COMPLETE	Complete globbing with menu
BANG_HIST[†]	Use !hist on cmd line (+K)	CSH_JUNKIE_LOOPS	Lists can be list; end	GLOB_DOTS	Leading dots match wildcards (-4)
BARE_GLOB_QUAL[†]	Use glob quals with just parens	CSH_JUNKIE_QUOTES	No unescaped newlines in quotes	GLOB_SUBST	Text from params can glob
BASH_AUTO_LIST[†]	List only on second tab	CSH_NULLCMD	Don't use \$NULLCMD , \$READNULLCMD	HASH_CMDS[†]	Hash commands when run

HASH_DIRS [†]	Hash directory when cmd runs	LIST_BEEP	Beep on ambiguous completion	PROMPT_SUBST	Expand substitutions in prompts
HASH_LIST_ALL [†]	Hash all cmds on completion	LIST_PACKED	Squeeze completion listings	PUSHD_IGNORE_DUPS	Only one instance of dir on stack
HIST_ALLOW_CLOBBER	Allow clobbering redirects in hist	LIST_ROWS_FIRST	List rows first in completion	PUSHD_MINUS	Swap plus and minus in pushd
HIST_BEEP [†]	Beep on bad !-history	LIST_TYPES	File types in completion list (-X)	PUSHD_SILENT	Don't print directory stack (-E)
HIST_EXPIRE_DUPS_FIRST		LOCAL_OPTIONS	Options set in functions are local	PUSHD_TO_HOME	With no args, pushd goes home (-D)
Trim duplicate lines to squeeze history		LOCAL_TRAPS	Reset traps on leaving func	RC_EXPAND_PARAM	A\${array}Z → Aa1Z Aa2Z ... (-P)
HIST_FIND_NO_DUPS	Never show duplicates in history	LOGIN	Shell is login (not settable) (-l)	RC_QUOTES	echo ' ' ' ' → ' '
HIST_IGNORE_ALL_DUPS		LONG_LIST_JOBS	Always use jobs -l (-R)	RCS [†]	.-files, else just /etc/zshenv (+f)
Never save duplicate of existing hist entry		MAGIC_EQUAL_SUBST	Any var=expr file-expands expr	REC_EXACT	Prefer exact match in completion (-S)
HIST_IGNORE_DUPS	No adjacent duplicates in history (-h)	MAIL_WARNING	Warn if mail file accessed (-U)	RESTRICTED	Can't cause as much damage
HIST_IGNORE_SPACE	' cmd' lines not saved (-g)	MARK_DIRS	Append / to globbed directories (-8)	RM_STAR_SILENT	No query on rm * (-H)
HIST_NO_FUNCTIONS	Don't store function definitions	MENU_COMPLETE	Cycle completions on TAB (-Y)	RM_STAR_WAIT	Don't believe first RMSTAR reply
HIST_NO_STORE	No history commands in history	MONITOR	Allow job control (-m)	SHARE_HISTORY	Read/write history as it happens
HIST_REDUCE_BLANKS	Trim excess whitespace in history	MULTIOS [†]	Implicitly tee/cat multiple <, >	SH_FILE_EXPANSION	Perform ~file, =cmd first
HIST_SAVE_NO_DUPS	Trim duplicates if saving history	NOMATCH [†]	Error on unmatched globs (+3)	SH_GLOB	Disable (, ,), < in patterns
HIST_VERIFY	Edit after ! expansion	NOTIFY [†]	Report bg jobs on change (-5)	SHIN_STDIN	Read commands from stdin (-s)
HUP [†]	Send SIGHUP to jobs on exit	NULL_GLOB	Remove unmatched globs (-G)	SH_NULLCMD	Null commands assume : behaviour
IGNORE_BRACES	No {..., ...} expansion (-I)	NUMERIC_GLOB_SORT	Numbers sorted in glob	SH_OPTION_LETTERS	Letter options work like in ksh
IGNORE_EOF	No exit on first ten eof's (-7)	OCTAL_ZEROES	0 introduces octal in math expn	SHORT_LOOPS [†]	Short verb!for!, select, if, function
INC_APPEND_HISTORY	Save history as it happens	OVER_STRIKE	Editor starts in overstrike mode	SH_WORD_SPLIT	Split words like lesser shells do (-y)
INTERACTIVE	Shell is interactive (not settable) (-i)	PATH_DIRS	Search path for dir/cmd (-Q)	SINGLE_COMMAND	Read a command and exit (-t)
INTERACTIVE_COMMENTS		POSIX_BUILTINS	builtin command is specialer	SINGLE_LINE_ZLE	Editor only uses one line (-M)
	Use comments interactively (-k)	PRINT_EIGHT_BIT	Show chars with high bit in listings	SUN_KEYBOARD_HACK	Ignore unmatched trailing ' (-L)
KSH_ARRAYS	Array syntax more like ksh	PRINT_EXIT_VALUE	Show non-zero exit status (-1)	UNSET [†]	Unset parameters cause error (+u)
KSH_AUTOLOAD	Emulate ksh function loading	PRIVILEGED	Privileged mode: safety first (-p)	VERBOSE	Print input lines as read (-v)
KSH_GLOB	Emulate ksh patterns, *(...) etc.	PROMPTT_BANG	! is special in prompts	XTRACE	Print cmds and args when run (-x)
KSH_OPTION_PRINT	Print options like ksh does	PROMPT_CR [†]	Print CR just before prompt (+V)	ZLE	Use the shell's line editor (-Z)
LIST_AMBIGUOUS	Only list ambiguous completions	PROMPT_PERCENT [†]	Do % expansions in prompt		

4 PARAMETER EXPANSION

<i>\$name</i>	(Similar for others with/without colon.)	<i>\${name#pattern}</i>
<i>\${name}</i>	<i>\${name:=word}</i>	<i>\${name##pattern}</i>
Basic parameter substitution	<i>\$name</i> if non-null, else use <i>word</i>	<i>\$name</i> with shortest (longest) match of <i>pattern</i> removed from head. Patterns as globbing; original parameter unchanged
<i>\${+name}</i>	and set <i>name</i> to that	
1 if <i>name</i> set, 0 otherwise	<i>\${name==word}</i>	
<i>\${name:-word}</i>	Unconditional assignment <i>\${name:?word}</i>	<i>\${name%pattern}</i>
<i>\$name</i> if non-null, else <i>word</i>	<i>\$name</i> if non-null, else print <i>word</i> and exit	<i>\${name%%pattern}</i>
<i>\${name-word}</i>	<i>\${name:+word}</i>	As for #, but remove from tail of match
<i>\$name</i> if set, else <i>word</i>	<i>word</i> if <i>\$name</i> non-null, else nothing	<i>\${name/pattern/repl}</i>

Substitute longest match of *pattern* by *repl*
`${(S)name/pattern/repl}`
 Substitute shortest match
`${name//pattern/repl}`
 Substitute all non-overlapping longest matches
`${name/#pattern/repl}`
 Subst if *pattern* at start of string
`${name/%pattern/repl}`
 Subst if *pattern* at end of string
`${name:/pattern/repl}`
 Subst if *pattern* matches entire string
`${#spec}`
 Count length of scalar or words of array
`${^spec}`
`${^^spec}`
 Turn on (off) **RC_EXPAND_PARAM**
`${=spec}`
`${==spec}`
 Turn on (off) **SH_WORD_SPLIT**
`${~spec}`
`${~~spec}`
 Turn on (off) **GLOB_SUBST**
`${spec:mod}`
 Apply history modifier *mod*
`${${name\dots}...}`
 Perform both sets of modifications on value
 N.B. does not do extra lookup, see (P)

Flags: usage `${(o)name}` etc.

A `${...:=...}` creates array
AA ...creates associative array
@ Split into words in double quotes
e Use shell expansion on result
P Force *\$name* to be re-used as name
o sort words in ascending order
O sort words in descending order
i case-independent with **o** or **O**
L all letters lower case
U all letters upper case

C capitalise words
V make special characters visible
q quote result with \
qq quote result with '
qqq quote result with "
qqqq quote result with \$'...'
Q remove one level of shell quoting
% Expand prompt escapes
%% Expand as prompt with current settings
X Report parse errors with quotes, patterns
c `${#name}` counts characters
w `${#name}` counts words
W As **w**, but count empty words
k With assoc include keys
v With assoc include values
p Use print escapes in args below
F Join words with newlines
f Split on newlines
z Split using ordinary parsing
t Substituted description, not value

Flags with delimiters; use any pair of chars in place of colon, also matched <>, (), {}, []

l:expr::string1::string2:
 Pad words on left to *expr* chars using
string1 repeated (default space),
string2 appears just once
r:expr::string1::string2:
 Ditto padded on right
j:string:
 Join words using *string*
 (occurs before splitting)
s:string:
 Split words at *string*

Flags applying with `${...#...}` or `${...%...}`

S search substrings too
I:expr:

Search/substitute *expr*th match
M Include matched portion
R Include unmatched portion (Rest)
B Include index of beginning
E Include index of end
N Include length of match

Summary of rules for substitution

- 1 Nested substitution, `${${...}}`
- 2 Subscript of parameter by name, `${name[i]}`
- 3 (P) flag
- 4 `"${...}"` joining
- 5 Nested subscript, `${${...}[i]}`
- 6 #, %, /. : modifications
- 7 (j) flag or space joining
- 8 (s), (f), (z) or = splitting
- 9 Shell word splitting (no flags)
- 10 (e) flag
- 11 (l) or (r) padding

Flags in indexing: usage `$name[(i)index]` etc.

e Backward compatability only
w Index by words of scalar
s:string:
 Separate words with *string*
p Use print escapes in following *s*
f Index by lines: same as **pws:n:**
r Reverse index array/substring/word
 For assocs, match against values
R As **r**, but last match (all for assocs)
k In assoc, keys are patterns; get first
K In assoc, keys are patterns; get all
i As **r**, but return index
 For assocs match against keys
I As **I**, but last match (all for assocs)
n:expr:
 Use *expr*'th first/last match **b:expr:**
r, R, i, I start search at *expr*th elt.

5 HISTORY

See also parameters **histchars**, **HISTFILE**, **HISTSIZE**, **SAVEHIST** and options **APPEND_HISTORY**, **CSH_JUNKIE_HISTORY**, **EXTENDED_HISTORY**, **HIST_ALLOW_CLOBBER**, **HIST_IGNORE_DUPS**, **HIST_IGNORE_SPACE**, **HIST_NO_STORE**, **HIST_VERIFY**, **BANG_HIST**, **HIST_BEEP**, **HIST_EXPIRE_DUPS_FIRST**, **HIST_FIND_NO_DUPS**, **HIST_IGNORE_ALL_DUPS**, **HIST_NO_FUNCTIONS**, **HIST_REDUCE_BLANKS**, **HIST_SAVE_NO_DUPS**, **INC_APPEND_HISTORY**, **SHARE_HISTORY**.

Events:

!	start history substitution unless after space, newline, =, (!- <i>n</i>	line <i>n</i> before current	!{...}	insulate history reference
!!	immediately previous command	! <i>str</i>	last line beginning with <i>str</i>	!"	no more expansion this line
! <i>n</i>	command line <i>n</i>	!? <i>str</i> [?]	last line containing <i>str</i>		
		!#	current command so far		

Words: separated from event by ‘:’

0	first word on line (command)	%	word matched by ? <i>s</i>	<i>x</i> *	same as <i>x</i> -\$
<i>n</i>	<i>n</i> th argument of command	<i>x</i> - <i>y</i>	range of words	<i>x</i> -	same but omit word \$
^	first argument of command	- <i>y</i>	same as 0- <i>y</i>		
\$	last argument of command	*	all arguments		

Modifiers: also with globbing and parameters

h	(head) strip last path cpt	Q	remove one level of quotes	f	repeat till no further change
r	remove suffix . <i>suf</i>	x	same but split words at space	F: <i>expr</i> :	same but max <i>expr</i> changes
e	leave only suffix <i>suf</i>	l	all letters lower case	w	(as prefix) apply to each word
t	(tail) leave only last path cpt	u	all letters upper case	W: <i>sep</i> :	same but separate words on <i>sep</i>
&	repeat last substitution	s/ <i>old/new</i> [/]			
p	don't execute new command		replace <i>old</i> by <i>new</i> (string)		
q	quote words from further subst	g	(before s) change every occurrence		

6 PARAMETERS

Special parameters: arrays are lower case except **status**; those marked[†] are assignable:

!	Last bg PID	@	Same as argv [@]	GID [†]	Current GID
ARGC		status		HOST	Current host name
#	Pos. param count	?	Last prog status	LINENO	Input line no.
\$	Current PID	pipestatus	Array of statuses for pipeline	LOGNAME	User name
-	Shell flags set	-	Last arg of prev cmd	MACHTYPE	Machine type
argv [†]		CPUTYPE	CPU determined at run time	OLDPWD	Previous working dir.
* [†]	Pos. params as array	EGID [†]	Effective GID	OPTARG	
		EUID [†]	Effective UID	OPTIND	Value, index of last getopts option
		ERRNO	System error no.	OSTYPE	OS type

PPID	PID of parent proc.	HISTFILE	Where to save shell history	PROMPT, prompt	
PWD	Current working dir.	HISTSIZE	Max history lines internally	PS1	Prompt used by editor
RANDOM [†]	Random integer: assign to seed.	HOME	Default target for cd cmd.	PROMPT2, PS2	Continuation prompt
SECONDS [†]	Seconds since start of shell	IFS	Word separators for input	PROMPT3, PS3	Prompt used by select cmd.
SHLVL	Incremented for each zsh	KEYTIMEOUT	Time to wait for key in sequence	PROMPT4 PS4	Execution trace prompt
signals	Names of signals	LANG	General locale setting	psvar, PSVAR [†]	Replace %v in prompts
TTY	Name of shell terminal	LC_ALL	Overrides LANG and other LC_*	READNULLCMD	Command used with only input readir.
TTYIDLE	Idle time of tty (secs.) or -1	LC_COLLATE	Determines character ordering	REPORTTIME	Longer commands print usage (secs.)
UID [†]	UID	LC_CTYPE	Determines types of characters	RPROMPT	
USERNAME [†]	username	LC_MESSAGES	For messages: not used by zsh	RPS1	Prompt displayed at right of line
VENDOR	Machine manufacturer	LC_NUMERIC	For decimal point, number separator	SAVEHIST	Max no. of lines in history file
ZSH_NAME	Shell invocation name	LC_TIME	Date and time format	SPROMPT	Prompt used for spelling correction
ZSH_VERSION	ID of zsh version	LINES	No. of lines on terminal	STTY	Args. to follow stty , export to run before external cmd.
Other parameters used by shell ([†] colon-separated path)		LISTMAX	No. of files to list without asking	TERM	Type of terminal for editing
ARGVO	Export to change argv [0]	LOGCHECK	How often to check watch (secs.)	TIMEFMT	Format of process time reports
BAUD	Line speed (zero to ignore)	MAIL	File to check for mail	TMOUT	SIGALRM if idle this long (secs.)
cdpath, CDPATH [†]	Directories search for cd command	MAILCHECK	How often to check MAIL (secs.)	TMPPREFIX	Path to temp files (/tmp/zsh)
COUMNS	No. of columns on terminal	mailpath, MAILPATH [†]	List of files to check for new mail. Can follow each with ?'message to print'	watch, WATCH [†]	List of users to watch log in/out (also all , notme , % tty, @ host)
DIRSTACKSIZE	Max size of dir. stack	manpath, MANPATH [†]	Not used by shell, probably used by man cmd.	WATCHFMT	Format of watch reports
FCEDIT	Default editor for fc cmd.	module_path, MODULE_PATH [†]	Path for dynamic modules; not imported	WORDCHARS	Non-alphanumeric characters used as part of a word by editor
fignore, FIGNORE [†]	Suffixes ignored for completion	NULLCMD	Used for redirs. with no cmd.	ZBEEP	Sequence to output instead of beeping
fpath, FPATH [†]	Path to search for autoload fns.	path, PATH [†]	Where to search for commands	ZDOTDIR	Where to find .zshrc etc.
histchars	three chars: 1) start of history (!), 2) quick history sub (^), 3) comment (#)	POSTEDIT	Output when line editor exits		
HISTCHARS	same as histchars				

Prompt escape sequences: those with [†] can use integer count *n*, which must immediately follow %. Default is 1 except for %_.

%%	A ‘%’	%t %Q	Time in 12 hour format		Use strftime to format <i>string</i>
%)	A ‘)’	%T	Time in 24 hour format	%l	Current tty
%d %/ [†]	\$PWD	%*	Same with seconds	??	Return status of last command
%~ [†]	\$PWD, but use ~-abbrevs	%n	\$USERNAME	%_ [†]	Parser status, <i>n</i> for max level
%h %!	Current history event no.	%N	Name of script, sourced file, function	%E	Clear to end of line
%L	The current value of \$SHLVL	%i	Line number inside %N	%#	# if root, else %
%M	Full hostname	%w	Date as day-dd	%v [†]	<i>n</i> 'th element of \$psvar
%m [†]	Host up to <i>n</i> 'th dot	%W	Date as mm/dd/yy	{...}	String which does not move cursor
%S %B %U	Start standout, bold, underline	%D	Date as yy-mm-dd	%<string< %>string> % [<string] % [>string]	
%s %b %u	Stop corresponding mode	%D{string}			Truncate string on L or R,

n gives max length.
 $\%c^\dagger \ \%^\dagger$ Component of $\$PWD$ (deprecated)
 $\%C$ Same but don't expand \sim 's

Codes for ternary expressions in prompts, format $\%(char.true-text.false-text)$, integer count n may precede or follow $'($. Test is true if:

$c \ . \ \sim$ Tilde'd path has $\geq n$ elts
 $/ \ C$ Ditto for absolute path
 t Current minute is n
 T Current hour is n
 d Current day of month is n

D Month is n (Jan = 0)
 w Weekday is n (Sun = 0)
 $?$ Last exit status was n
 $\#$ Running as uid n
 g Running as gid n
 L $\$SHLVL \geq n$
 S $\$SECONDS \geq n$
 v $\${\#psvar} \geq n$
 $-$ At least n shell constructs
 $!$ True if shell is privileged

Escape sequences in $\$WATCHFMT$:

$\%n$ Name of user
 $\%a$ 'logged on' or 'logged off'
 $\%l$ User's tty
 $\%M$ Full remote host name
 $\%m$ Host to first $'$
 $\%S \ \%U \ \%B$ Start standout, underline, boldface
 $\%s \ \%u \ \%b$ Stop corresponding mode
 $\%t \ \%@$ Time in 12-hour format
 $\%T$ Time in 24-hour format
 $\%w$ Date as **day-dd**
 $\%W$ Date as **mm/dd/yy**
 $\%D$ Date as **yy-mm-dd**

Ternary expressions in $\$WATCHFMT$, format $\%(char.true-text.false-text)$, can be used with l , n , m or M (true if non-empty value for corresponding %), or a (true for login, false for logout).

7 CONDITIONS

File tests: followed by a file name

Cond

true if file

$-a$ exists
 $-b$ block special
 $-c$ character special
 $-d$ directory
 $-e$ exists
 $-f$ plain file
 $-g$ has setgid bit set
 $-h$ symbolic link
 $-k$ has sticky bit set
 $-p$ FIFO/pipe
 $-r$ readable
 $-s$ has size > 0
 $-u$ has setuid bit set
 $-w$ writeable

$-x$ executable/dir. readable:
 $-L$ symbolic link
 $-O$ owned by UID
 $-G$ owned by GID
 $-S$ socket
 $-N$ access time not newer than mod time

Other tests with single argument:

$-n$ string, length > 0
 $-o$ option, is set
 $-t$ fd, open to tty
 $-z$ string, length zero

Two argument tests ($[[a \ test \ b]]$):

$-nt$ file a newer than b

$-ot$ file a older than b
 $-ef$ names refer to same file
 $=$
 $==$ *string matches pattern*
 $!=$... does not match
 $<$ ASCII before
 $>$ ASCII after
 $-eq$ Numbers equal
 $-ne$ Numbers unequal
 $-lt$ Numeric $a < b$
 $-gt$ Numeric $a > b$
 $-le$ Numeric $a \leq b$
 $-ge$ Numeric $a \geq b$

Also grouping $(...)$, negation $!$, and $\&\&$, or $||$; special handling of $/dev/fd$.
